

Present the design analysis

engineering

What you need: bird feeder prototype from earlier in this project · Investigation Journal pages from earlier in this project (including Design Brief and test notes) · presentation paper for short cue notes · pencils

Words to use

Design analysis · Iterative design · User need

Our question

What does our test evidence show about our feeder, and what would we do next?

I predict...because...

User need

Design choice and why

Test evidence

What changed after testing

Next step

What did the evidence show about holds seed, stays dry and stable perch?

What changed in your design and why?

What is one next step and which success criterion would it improve?
