

The eye and reacting to a stimulus

living-things

What you need: clear plastic sheet or face visor · Investigation Journal page

Words to use

Pupil · Stimulus · Automatic response

Our question

Does the eye blink on its own when something sudden happens nearby?

I predict...because...

What we saw in each light

Where we looked	How big the pupil looked

What we found out

Did your partner blink without seeming to decide?

What does that tell us about how the body can react?
