

Computational thinking unplugged

technology

Today's job

Write your working command list in order (only forward, turn left, turn right). Then write the step that went wrong and what you changed.

The first small step I would write

Our desk mat: mark start, goal and the wall square

Our command list, in order

Step	Command (forward / turn left / turn right)

Did it work first time? If not, which step went wrong and what did you change?

Words to use

algorithm · bug · decomposition · debugging
