Sequence · Bug · Debug

Our question

What order do the blocks need to be in for Banana Jump to work?

The scripts we built, and what starts each one

What it does	What starts it
The cat runs	
Bananas are made	
A banana moves across	
The cat jumps	

One bug we found

How we worked out which block was wrong

What we changed, and what happened when we ran it again

One thing we would add if we built it again
