

Energy in our school: using less, going clean

energy-forces

Words to use

Energy use and waste · Renewable energy · Energy-saving action

Our question

Where is energy used and wasted in our school right now?

What is a waste sign?

Energy used when nobody needs it, or more than is needed: a light on in an empty room, heating with a window open, a screen left on. One tally mark for each one you spot.

I predict...because...

Our energy walk

Stop (the place)	What is using energy	Waste we noticed	Tally of waste signs

Draw a bar chart of our results

Up the side: number of waste signs (number the side to fit your biggest tally)

Along the bottom: the stops on our walk

Which stop had the most waste signs?

Was that use, waste, or both?

Did the evidence match your prediction?

Our clean energy source: what it is, how it gives us energy, and one link to Ireland
