

Design Brief

Drawing a design others can build

engineering

Words to use

Design sketch • Label • Build note

The problem

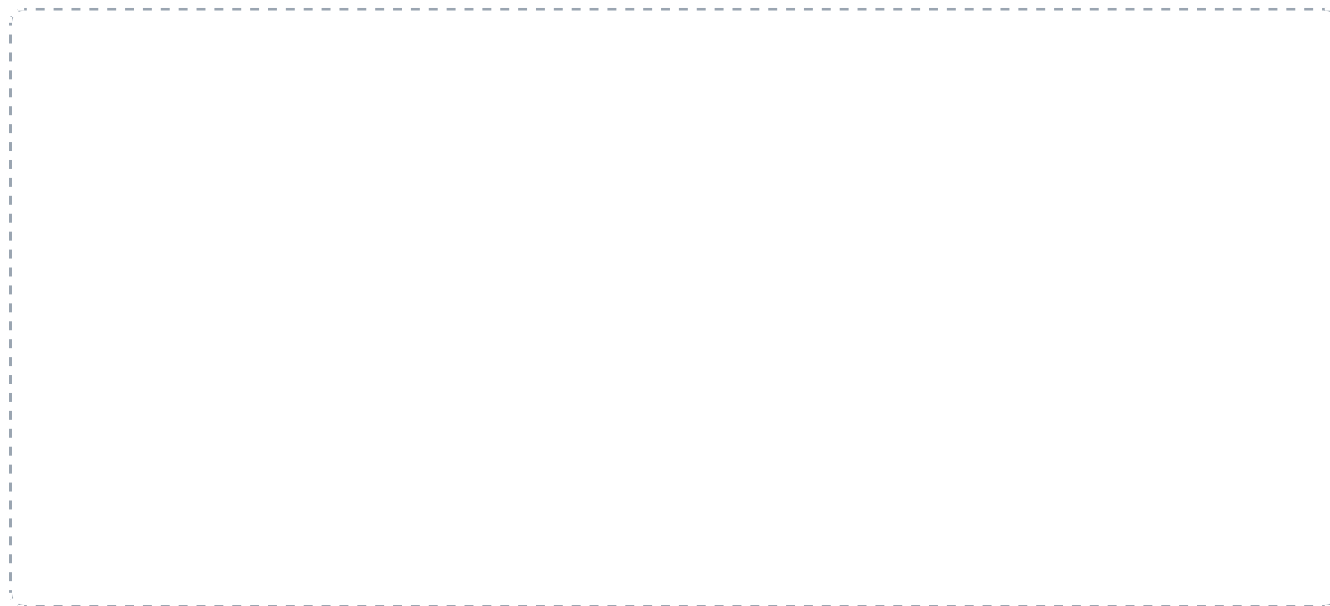

Design a simple free-standing stand that holds a postcard upright on a desk

Who is it for?

A classmate who must understand the idea from the drawing alone

What it must do, and must NOT do

Sketch only in this step: do not build yet • A simple folded L-shape or lean-back is a full valid design • Design may only use paper or card and tape when built later • The stand must stand up by itself (free-standing) • The sketch must show parts, materials and rough sizes

My first ideas: draw and label them**Check your drawing shows**

Sketch a side view of your stand • Label each part • Name the materials • Mark rough sizes in centimetres • Add a short build note about how parts join

We will know it works when...

Every main part is labelled • Materials are named on the sketch • Rough sizes are marked in centimetres • At least one build note explains a fold or join
