

## CAMOGIE CLUB PLAYERS

- 1 Read the story: a camogie club has 6 teams and every team has 4 players. How many players are there?
- 2 Underline the action words 'every team has': these show equal groups.
- 3 Equal groups means we multiply, so the number sentence is  $6 \times 4 = ?$
- 4 Work it out: 6 groups of 4 make **24** players in total.

## WARM-UP

Use the blank bar models to show each story's operation.

1. Draw a bar model that shows  $35 + 28$  for the hurling points

## PRACTICE

- 1 Saoirse gathers **26** sliotars and finds **17** more. How many sliotars does she have altogether?

## SPOT THE MISTAKE

Aoife reads: 'A camogie club has 6 teams of 4 players. How many players in all?' She works it out like this:

$$6 + 4 = 10$$

So there are 10 players.

**Aoife chose the wrong operation. What should she do, and what is the correct answer?**
