

READING A GAME SPINNER

- 1 Look at how much of the spinner each colour covers.
- 2 The spinner has 6 red sectors and only 2 blue sectors.
- 3 Red covers most of the circle so landing on red is likely.
- 4 Blue is just a thin slice so landing on blue is unlikely.

WARM-UP

Slice and shade each circle spinner to match the chance labels.

1. On the first circle shade 5 sectors red and 3 blue to make red likely
2. On the second circle shade 1 sector red and 7 blue to make red unlikely
3. On the third circle shade 4 sectors red and 4 blue to make red and blue equally likely

PRACTICE

- 1 In a board game the spinner has 7 red sections and 1 blue section. Is landing on red likely or unlikely?
- 2 The game spinner is half red and half blue with 4 sections each. Are red and blue equally likely?

? ALWAYS, SOMETIMES, NEVER

Always, sometimes or never true? Write A, S or N.

IRISH FACT

How likely is rain?

Valentia in County Kerry averages about 250 wet days a year, so rain there is likely on most days — while Dublin Airport is closer to 130 wet days.
