

ADDING MONEY AMOUNTS IN COLUMNS

- 1 Write €12.50 and €8.75 with the decimal points lined up.
- 2 Start from the right: hundredths $0 + 5 = 5$.
- 3 Tenths: $5 + 7 = 12$, write 2 carry 1 euro.
- 4 Euros: $2 + 8$ plus the carry $1 = 11$.

 WARM-UP

Use the coin mat to build and total these amounts.

1. Build €3.05 once and €3.25 four times then add them all on the mat.
2. Build €16.40 and €7.85 with points aligned and add them column by column.
3. Build €20.00 and subtract €12.50 to find the change.

 PRACTICE

- 1 Three friends share a €72.00 food bill equally. How much does each pay?
- 2 A shopper buys four packs of juice at €25.00 each. What is the total cost?
- 3 Build €3.05 once and €3.25 four times on the coin tray then add them all.
- 4 A receipt shows €12.50 total but one item is written €7.5. Why is this wrong and how do we write it correctly?

ALWAYS, SOMETIMES, NEVER

Always, sometimes or never true? Write A, S or N.

- a. €4.5 is the usual way to write four euro fifty cent. ☐
- b. When adding €12.50 and €8.75 the decimal points must line up in the same column. ☐
- c. €7.5 is a correct way to write seven euros and fifty cents. ☐
- d. Multiplying €3.25 by 4 can be done by adding four copies of the amount. ☐

IRISH FACT Ireland and the euro

Ireland began using **euro** notes and coins on **1 January 2002**, replacing the Irish punt.
