

End-of-primary strands recap – five-strand IWB tour

WHAT THIS LESSON TEACHES

A whole year of number work in one place: a digit's value comes from **the column it sits in**, from thousands down to **thousandths**. Each place is **ten times** the one on its right.

TTh	Th	H	T	U	.	t	h	th

→ **0.345** is 3 tenths, 4 hundredths and 5 thousandths.

→ Line the **decimal points** up and every digit falls into its own column.
